

The inline compact sensor **SONOFLOW IL.52 V2.0** serves to detect smallest flow rates of liquids quickly.

Constructed as a built-in component for machines and apparatuses, the sensor could be easily mechanically installed and electrically integrated into the control system. Due to the current, frequency and switching outputs industrial dosing applications can be supported. The RS485 interface allows bus operation of up to 12 sensors in rough industrial environments.

Specifically designed for the use in areas with rigorous hygiene requirements, the sensor is suitable for circulation cleaning and steam sterilization.
